## KNOW YOUR RICON LIFT INSIDE AND OUT...

### Inside:

#### **Product maintenance including the new FMVSS 403 features-**

Time is running out to register for the **May 11<sup>th</sup>** service school in **Atlanta GA**. Attendees will be **Ricon certified** to perform all aspects of maintenance for both the S-Series and KlearVue platform wheelchair lifts. Our six hour course will cover basic to advanced maintenance procedures that will help keep your fleet on the road and increase the life of your lift. Plus, learn how new FMVSS 403 regulations effect the lifts you're buying today.

Whether you are new to accessibility equipment maintenance or a seasoned pro that just needs a refresher, this is the class for you. Instruction is based on in-depth product knowledge and presented hands on with equipment on site.

**Register today at [www.riconcorp.com](http://www.riconcorp.com) or call 800-322-2884**

### Out:

#### **Product Update: Applications and Installations Made Easier-**

1. Redesigned standee handrails shorten overall height on S and K-5500 series lifts.

These new "Low Profile" handrails lowered the overall height on **all 5500 series lifts** to 57". This makes the longer travel 5500 series lifts universal for all current production bus doors in North America and will allow manufacturers to simplify inventory requirements for RICON products.

2. Effective Monday, **April 25<sup>th</sup>**, all RICON KlearVue lifts will be shipped from the factory fully assembled and adjusted.

This change will shorten install time at the OEM or dealer level and significantly reduce the need to make adjustments in the field at delivery.

**Two more ways RICON is making its products easier to use and more reliable.**
